

# YOU CANNOT SMOKE HEMP

Well, that IS NOT completely true. Of course you can smoke HEMP. You can also smoke maize and sunflower. **The point IS...smoking these plants does not get you high.** There has been GREAT confusion regarding THE HEMP FAMILY. It is a family AND, Marijuana is only ONE MEMBER. IT is the one that WILL get you high. That is NOT the **PRIZE PLANT**!

People, Industry and Governments have overlooked the Industrial Opportunity of HEMP because they mistakenly believed it was Marijuana. The United States struggled with this issue for 100 years even though its early growth was largely due to HEMP cultivation. The Oil and Cotton Industries were very successful in demonizing the plant and eliminating the competition.

**However, Asia** has been very clear about the virtues of the plant and have consistently used it for at least 10,000 years. The *United States has made some scientific assessments* to help its citizenry and government get a better understanding of the differences, varieties and opportunity available by cultivating HEMP. This summary **may be beneficial for us as well.**

**\*HEMP is capable of producing 25,000+ products\***
